SUMMARY

Most of my client work is gambling/casino platforms that need something to update in real time: leaderboards, wager tracking, reward brackets. That's a harder problem than a normal CRUD site, since it has to stay accurate and fast even when a lot of people are hitting it at once during an active promotion. I've also built full Next.js/TypeScript sites for restaurant and product clients when the job called for a modern frontend instead of a Flask template. I write the backend, the frontend, and I deploy it myself; there's no handoff between 'the person who designs it' and 'the person who ships it.'

EXPERIENCE

Freelance Full-Stack Developer — Remote

2021 – Present (5 years)

- Built real-time leaderboard and wager-tracking systems for gambling-affiliate clients (KrispyGambles, PigeonReward, Zen Gambling), processing live user activity with instant rank and reward updates under concurrent load
- Delivered BonusRiver, a casino bonus aggregation and comparison platform with real-time promotional data, an intuitive filtering system, and optimized/cached queries for fast load times
- Built pHuel Food and pHuel Cafe, full Next.js/TypeScript restaurant sites with Framer Motion transitions, designed mobile-first and deployed on Vercel
- Designed and built mohitdev.tech end-to-end: Flask + PostgreSQL backend with an admin panel, AI-assisted blog generation (Groq/Llama-3), a real-time support ticket system, and automated SEO tooling
- Own the entire delivery pipeline independently — requirements gathering, architecture, backend APIs, frontend, database design, and deployment — with no handoff between design and delivery

SELECTED PROJECTS

pHuel Food

<https://phuel-food.vercel.app/>

Built for a real restaurant client who wanted something better than a templated builder site. Menu, catering info, gallery, hours, and contact, in Next.js with Framer Motion transitions between sections. Most of their tr...

pHuel Cafe

<https://phuelcafe.vercel.app/>

Concept build, not a client project: I wanted a second Next.js case study beyond pHuel Food, so I designed and built a full cafe site from scratch: menu system, gallery, location/hours block, and a cookie-consent-style d...

Soranafy

<https://www.soranafy.xyz/>

A self-directed project: I wanted a portfolio piece that wasn't client work, to show a full Next.js/TypeScript product landing page built end to end, copy included. Music-streaming concept, dark high-contrast UI, Framer ...

AI-Powered Content Engine

I developed an AI-powered blog generation system that automatically researches topics, structures articles, and formats content using advanced language models like Groq's Llama-3. I solved the challenge of repetitive or ...

BonusRiver

<https://bonusriver.com/>

For BonusRiver, I developed an online casino bonus and review platform that aggregates real-time promotional data and provides users with comparative tools. I focused on building an intuitive filtering system that allows...

TECHNICAL SKILLS

Backend	Python, Flask, Node.js, Django
Cloud	AWS
Database	MongoDB, PostgreSQL
Frontend	HTML5, JavaScript, CSS3, Tailwind CSS, React, Next.js, TypeScript, Framer Motion
Tools	Git

EDUCATION

B.Tech, Information Technology
2025 – 2029 · Currently Pursuing

CERTIFICATIONS

- AWS Academy Graduate — Generative AI Foundations (Training Badge)
- FutureSkills Prime — Digital Edge 101
- C Language — 6-Month Course Certificate
